Platform – Instruments in EVE

Instruments:

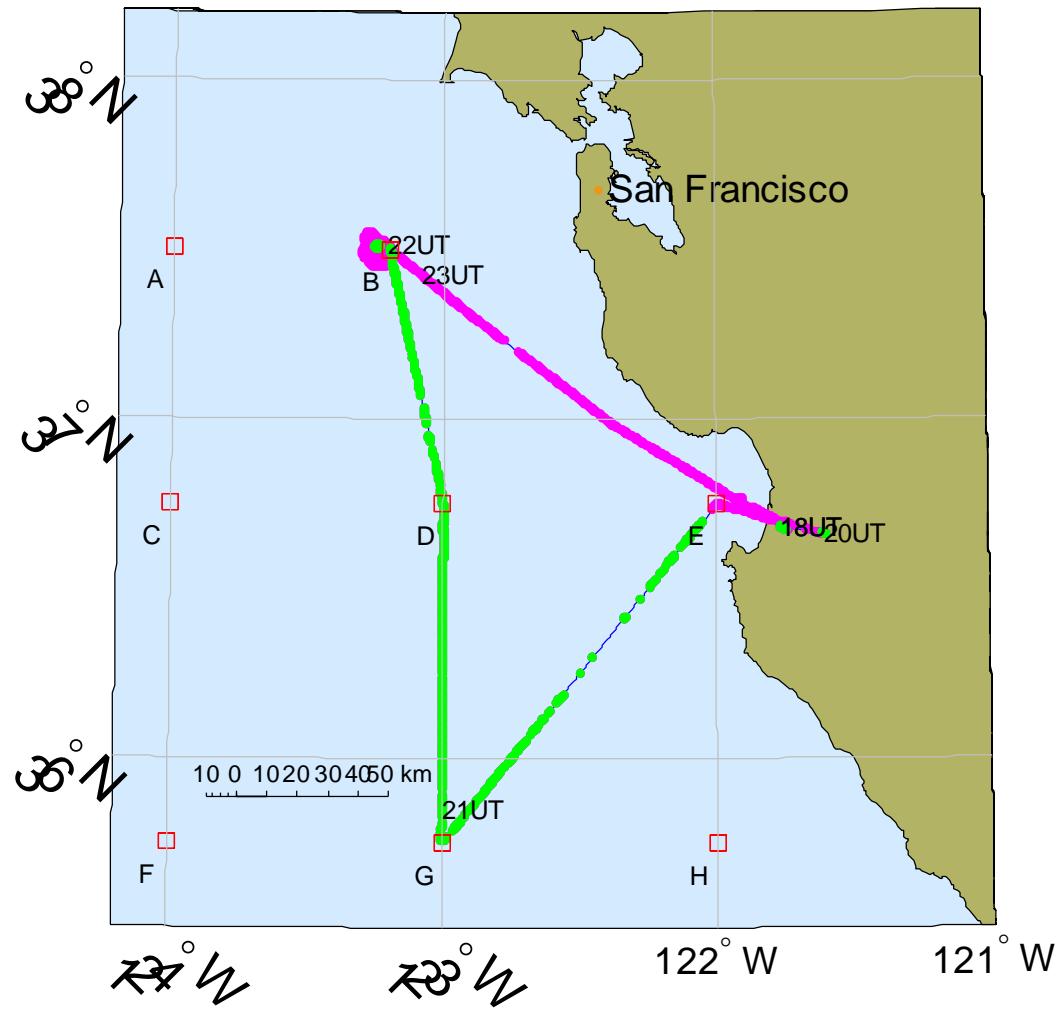

AATS-14, 14-channel airborne sunphotometer, AOD 0.35-2.14 μ m

CADENZA, Cavity-Ringdown, aerosol extinction - 0.675 and 1.55 μ m

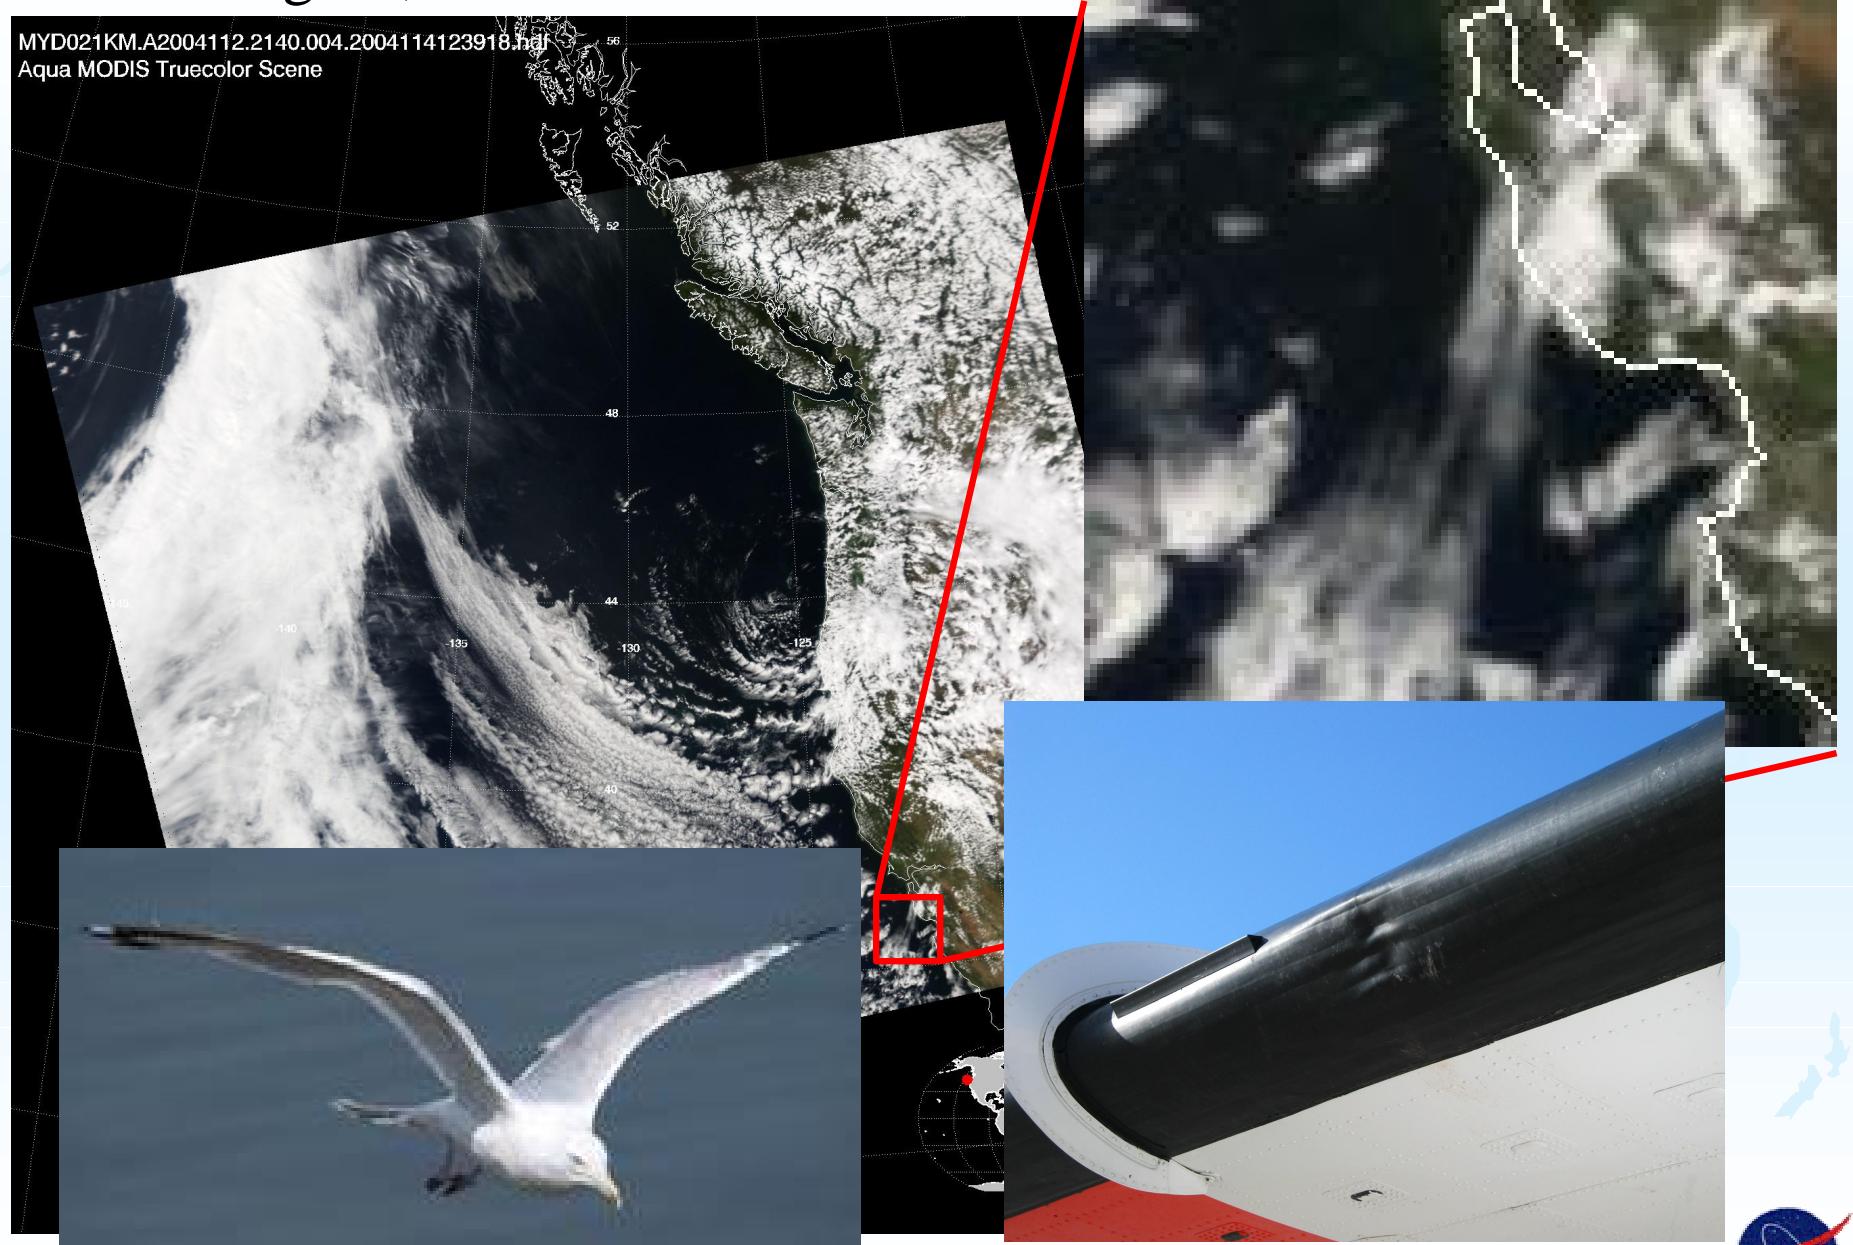

3- λ nephelometer + PSAP, aerosol extinction - 0.453, 0.519, 0.675 μ m

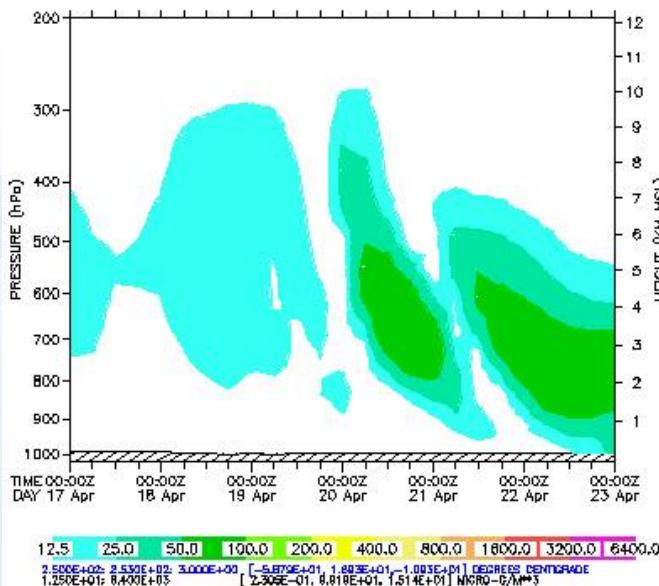

EVE – domain and ideal flight track

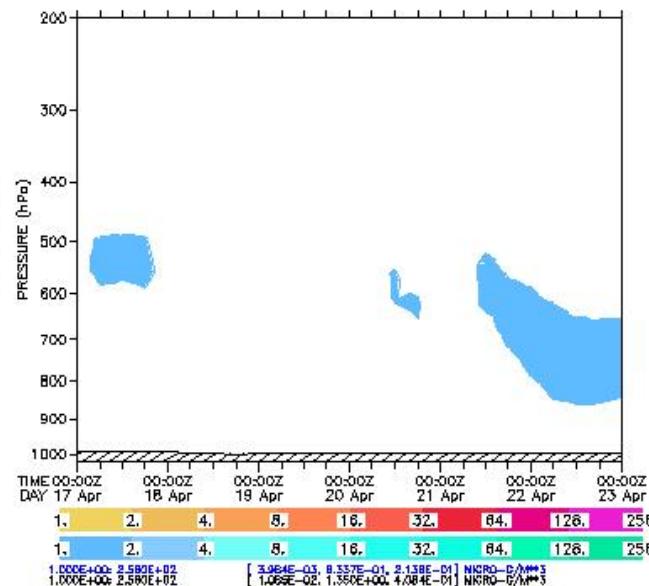

EVE – glint, clouds and B-1-r-d-s

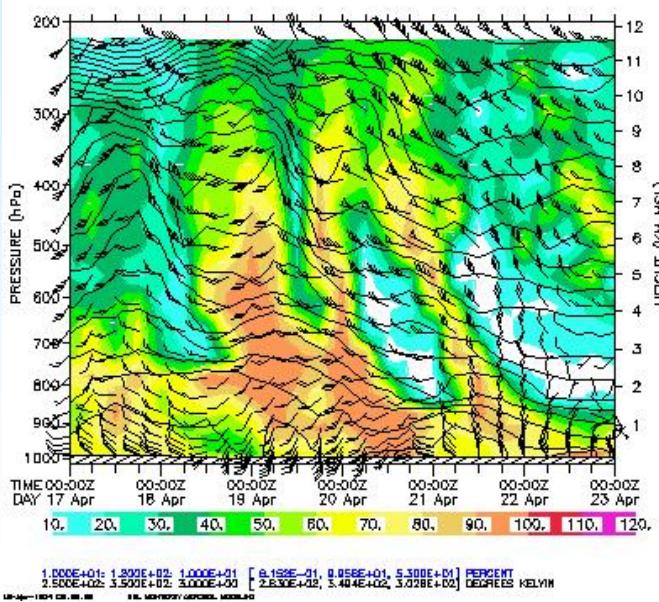

NAAPS Dust ($\mu\text{g}\cdot\text{m}^{-3}$)
at monter (36.60,121.83) for 2004041700_2004042300

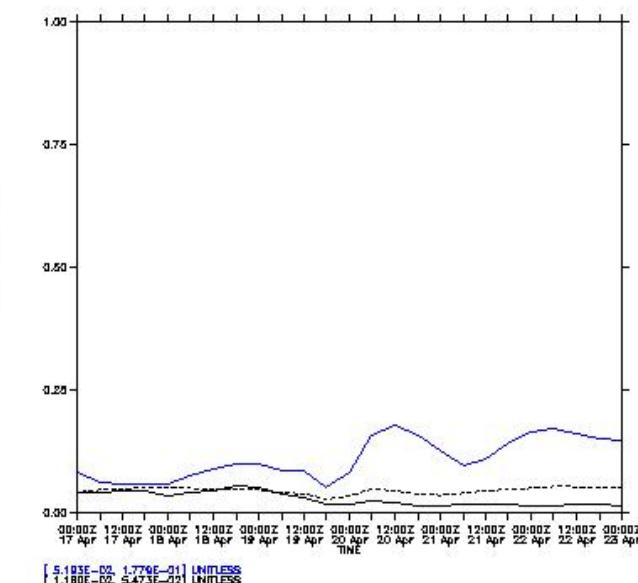

NAAPS Sulfate (red, $\mu\text{g}\cdot\text{m}^{-3}$), Smoke (blue, $\mu\text{g}\cdot\text{m}^{-3}$)
at monter (36.60,121.83) for 2004041700_2004042300

NOGAPS RH (%), Pot. Temp. (K), Winds (full barb = 5m/s)
at monter (36.60,121.83) for 2004041700_2004042300

NAAPS Optical Depth: Dust (blue), Sulfate (black), Smoke (dash)
at monter (36.60,121.83) for 2004041700_2004042300

Summary / Progress

- 1) In EVE, a total of 36 and 49 coincident AOD validation measurements were collected for Terra and Aqua respectively. These measurements were all taken over dark water, extend to the 1.24, 1.64 and 2.14 μ m MODIS wavelengths, and are for the smallest regular level 2 AOD retrieval scale of 10km.
- 2) A preliminary analysis indicates that for MODIS-Terra about 80% of the MODIS AOD retrievals are within the estimated uncertainty of $\pm 0.03 \pm 0.05^*AOD$, this is true for both the visible and near-IR retrievals.
- 3) A preliminary analysis indicates that for MODIS-Aqua about 50% of the MODIS AOD retrievals are within the estimated uncertainty of $\pm 0.03 \pm 0.05^*AOD$, the fraction of near-IR retrievals that fall within this uncertainty range is about 25%.
- 4) This difference could be due to the fact that there may have been relatively more dust present during the Aqua validation days . Aqua calibration could also be an issue.
- 5) The spatial variability as derived from the suborbital measurements during a few select flight segments is larger than that derived by MODIS, in particular in the near-IR.
- 6) The analysis shows that only measurements within the scale of one retrieval box (~10km) can be used for studies of spatial variability of AOD.
